FOR PROFESSIONAL OR INDUSTRIAL USE ONLY

**GENERAL INFORMATION**

LeafShield is a wax emulsion concentrate that, when applied to foliage, dries to a thin flexible waxy layer. LeafShield holds moisture in the leaves and will reduce transpiration stress associated with transplanting, transporting, winter/summer desiccation, and other situations when there is insufficient moisture absorption by the plant roots.

**SHAKE WELL - DO NOT FREEZE**

- Apply LeafShield only when temperatures are above 39°F (4°C), when good drying conditions prevail and rain is not expected within 8 hours.
- For maximum effectiveness, fully apply to all plant surfaces. Spray to runoff, or dip the foliage. For improved foliar coverage, use a spreader at labeled rates.
- DO NOT SPRAY OR DIP ROOTS.

**DIRECTIONS FOR USE**

**NURSERY**  
**Transplanting** -- Coniferous and deciduous trees and shrubs, rooted cuttings, liners, ground covers, evergreen seedlings, etc., dip or spray foliage with a concentration of LeafShield. Use 4 to 8 fl oz (118-236 ml) of LeafShield per gallon (3.8 L) of water. For more sensitive plants or plant tissue, use 4 fl oz (118 ml) of LeafShield per gallon (3.8 L) of water.

**Transporting** -- Nursery stock, foliage plants, seedlings, rooted cuttings, etc. Spray or dip the foliage with a concentration of LeafShield. Use 4 to 8 fl oz (118 - 236 ml) of LeafShield per gallon (3.8 L) of water. For more sensitive plants or plant tissue, use 4 fl oz (118 ml) of LeafShield per gallon (3.8 L) of water.

**Protection** -- Established ornamentals, Christmas trees, wreaths and garlands, foliage plants, etc. Spray or dip the foliage with a concentration of LeafShield. Use 8 fl oz (236 ml) of LeafShield per gallon (3.8 L) of water. LeafShield slows the tissue water loss of indoor plants, Christmas trees, wreaths and garlands.

**Turfgrass** -- Use 1-2 fl oz (30-60 ml) of LeafShield per 1000 sq ft (100 m<sup>2</sup>) in as little water as necessary to coat leaf blades.
